

Environmental Policy

Savannah Energy considers that a high standard of Environmental protection is critical to the success of our business. Savannah is committed to minimising our environmental impact and promoting sustainable practices throughout our operations:

- Avoiding, minimising or safely managing the impacts of our operations in the natural Environment and on the communities in which we operate.
- Where significant potential Environmental impacts are identified, develop, implement, and maintain a project specific Environmental Management Plan including relevant emergency response and remedial plans.
- Monitor, measure and improve Environmental performance throughout the life cycle of each project and setting realistic targets for all operations to follow.
- Dedicated to complying with all applicable environmental laws, regulations, and standards at the local, national, and international levels.
- We are committed to partnering with suppliers and contractors who share our environmental values. We will prioritize environmentally sustainable products and services.

Work with government and regulatory bodies to ensure all standards are met and procedures adapted to ensure compliance in all operations.
