

## Host Country and Community Stakeholder Engagement Policy

We consider that maintaining excellent relationships with our key host country and community stakeholders is a priority for the success of our business and we are committed to acting in a fair and responsible manner as a core element of our business practice. This policy underlines our commitment to responsible operations in our host countries and communities by integrating their stakeholder considerations into our daily decisions and management processes.

Savannah makes the following host country and community stakeholder engagement commitments:

- To engage in open and long-term dialogue with our stakeholders, with an efficient consultation process and an operational grievance mechanism, while maintaining the highest standards of governance;
- To seek to understand and respect local communities' rights, while conducting our operations in a safe and responsible manner; and
- To aim to build strong and meaningful relationships with our local communities in which we operate.

In line with the first pillar of our sustainability strategy, we aim to make a positive difference to the socio-economic development of our host countries and communities, in collaboration with local authorities and civil society, in the following ways:

- To contribute to the economic development of the countries in which we operate through the development of businesses, projects and infrastructure that can make a significant difference to those countries;
- To deliver energy sustainably - as access to energy is essential for economic development and is positively correlated with many other key human development metrics;
- To promote local employment and development opportunities to drive local socio-economic prosperity and champion the development of local content through our global procurement policy; and

- To provide social impact projects and investment in our host countries and communities, with a focus on improving local living standards via health, education and agricultural initiatives, as well as the provision of water and local infrastructure projects, and training to foster future economic self-sufficiency.
